

## Ascio Web Service

Integrate your existing systems with AscioNIC through a unified interface. Ascio Web Service gives direct access to our technology platform in an easy and manageable way.

### AscioNIC technology platform

The AscioNIC technology platform is a unique domain registration system that offers standardised registration and management procedures for more than 250 TLDs. Using a modular approach, AscioNIC is the ideal registration engine for companies wishing to offer a range of TLDs.

### Ascio Web Service (AWS)

Web services are web-based applications that use open XML based standards and transport protocols to exchange data with clients.

The Ascio Web Service provides a unified interface that allows you to utilise those modules of the AscioNIC technology platform that suit your specific needs.

### Real-time, flexible & extensible

The Ascio Web Service is both real-time and web-based using open XML-based standards and transport protocols, allowing it to be integrated with any existing provisioning system. It provides you with the flexibility of outsourcing your domain name requirements without the need for significant redevelopment of your existing infrastructure. The extensibility

of the interface ensures that as we update existing services and add new ones, you'll be able to take advantage of the enhancements quickly and easily.

You receive full documentation including sample code for Java, .NET, PHP and Perl implementations.

### Features

- Availability checks
- Registrations
- Transfers
- Modifications
- Status checks
- Full TLD and Local Presence information (available soon)
- Supports IPv6
- 65+ live TLD registrations
- Order validation

### Benefits:

- High performance – a scalable, real-time solution designed to meet the needs of high-volume online sites.
- Ease of integration – full documentation including sample code for Java, .NET, PHP & Perl implementations.
- Fast deployment – a typical integration project should take days, not weeks or months, to complete.
- Accurate & up to date – real-time order statuses, information about registration restrictions and more.
