

# WHMCS - Factsheet

## Introduction

WHMCS is an all-in-one client management, billing & support solution for online businesses. Handling everything from signup to termination, WHMCS is a powerful automation & support tool. It can be used as a standalone client area portal, or integrated into your website, and provides you with a members' area to allow clients to sign up and manage their account & services with you, make payments, and request support.

WHMCS integrates with payment gateways, server provisioning APIs, domain registrars & fraud protection services to be able to fully automate the ordering and provisioning process.

## How does it work with Ascio?

We have partnered with WHMCS to ensure that you can take full advantage of everything that WHMCS and Ascio can offer. By working in unison, we can provide you access to the domains you need, and you can continue to get your billing support from WHMCS. Our Ascio plugin is constantly being developed so that we allow our partners to register as large a number of domains as possible through WHMCS. (A full list of available TLDs is available below.)

## Is it easy to install?

Installing the Ascio plugin in WHMCS is easy, and you don't need to be a technical expert to do so. Simply download and copy the Ascio plugin to your WHMCS registrar's directory and configure it within the WHMCS configuration section panel. If you get stuck, don't worry, we have plenty of documentation as well as our technical team here to support you should you need so.

## Advantages

- Live updates – when registering or transferring TLDs, we send real-time callbacks to WHMCS.
- A large portfolio of TLDs available through Ascio, be it gTLDs, ccTLDs, IDNs, or New gTLDs
- Ascio DNS integrated – Managed zones and records. Auto-create DNS records created when registering or transferring domains.
- Clean modular open source code – code can be easily maintained by you (i.e. adding TLDs, customising workflows)
- Developer support – We have a team here to support you when you need it.

## Limitations

Some TLDs restricted: Although we offer a large variety of TLDs, not all of the 2300+ TLDs we have, are able to work in our plugin. However, we are adding TLDs with special parameters every month so we hope to always be able to meet our customers needs.

## Supported Features?

Features*
Register
Transfer
Renew
Registrar lock
Update Nameservers
Update WHOIS
Get EPP Code
Register Nameservers
DNS Record Management
Domain Sync Callbacks
Realtime Status
ID-Protection

\*If there are any supported features that you would like please get in touch with us today. We are able to support several different features within the WHMCS plugin, however, in some cases workarounds will be needed.

## What TLDs does WHMCS cover?

WHMCS can be used for all TLD's without extra parameters, such as new gTLDs. However, when extra parameters are needed (i.e. registrant numbers, extensions) workarounds are required. For this, we are proactively adding new TLDs every month to ensure that we can offer our customers exactly what they need.
